**Slot:** C

**Course Name:** Artificial Intelligence

**Course Faculty:** Dr.B.Nagarajan

### Project Title: Exam Guardian: Cloud-Based Invigilation & Cheating Detection

#### Module Photographs:

#### Project Description:

**Exam Guardian: Cloud-Based Invigilation & Cheating Detection** is an AI-powered system developed to monitor online examinations and identify suspicious activities in real time. It captures the candidate's webcam feed and uses OpenCV and YOLOv5 to detect activities such as mobile phone usage, multiple persons, head movement, and gaze deviation.

The system records suspicious incidents along with screenshots, webcam images, and timestamps as evidence for examiner review. By combining real-time detection, secure storage, event logging, and dashboard-based monitoring, the project helps improve the fairness, security, and reliability of online examinations.
